

Name: _____

There are 25 points possible on this quiz. This is a closed book quiz. Calculators and notes are not allowed. **Please show all of your work!** If you have any questions, please raise your hand.

Exercise 1. (9 pts.) Estimate the area under $f(x) = \frac{4}{x+1}$ from $x = 0$ to $x = 6$ using three approximating rectangles and

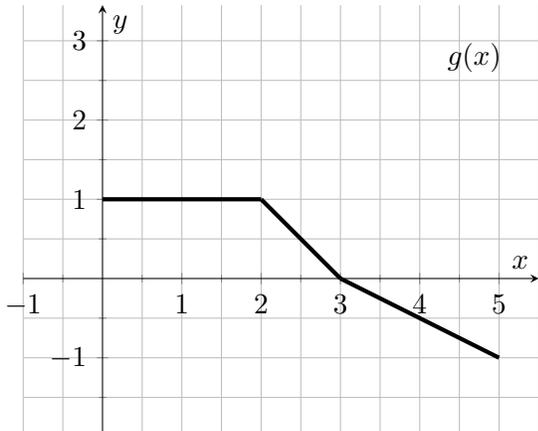

- (a.) left endpoints. Sketch the rectangles on the graph below. (b.) midpoints as sample points. Sketch the rectangles on the graph below.

Exercise 2. (3 pts.) The speed of a skier increased steadily during the first three seconds of a race. Her speed at half-second intervals is given in the table. Find a lower estimate for the distance she traveled during the first three seconds. Include units with your answer.

time (in seconds)	0	0.5	1	1.5	2	2.5	3
velocity (in feet/sec)	0	4	10	16	20	22	24

Exercise 3. (4 pts.) Use the graph of $g(x)$ to evaluate the integral $\int_0^5 g(x) dx$.

Exercise 4. (4 pts.) Evaluate the integral $\int_{-3}^3 (\sqrt{9-x^2} + 4) dx$ by interpreting it in terms of areas.

Exercise 5. (5 pts.) Assume that $\int_1^5 f(x) dx = 7$. Use this fact and the properties of integrals to evaluate the integrals below.

(a.) $\int_5^1 f(x) dx$

(b.) $\int_1^5 (3 - 2\pi f(x)) dx$
