

Worksheet Cryptography 3: Polyalphabetic Ciphers

1. Fill in the blanks below.

- (a) Shift ciphers are vulnerable because *they can be hacked using frequency analysis and guess-n-check.*
- (b) Transposition ciphers are vulnerable because *they just scramble the letters.*

2. Progressive Caesar Cipher (Sequential Shift)

- (a) Using a private key of $A \rightarrow J$ (and sequential shift), encrypt the word
CONSTITUTION.

- (b) Using a private key of $A \rightarrow D$, decrypt the ciphertext

See extra page for more detail.

- (c) What are some advantages of this cipher?

*It's easy to remember & implement, theoretically
key is short*

- (d) What are some disadvantages of this cipher?

*It's a pain to have to carry a tabula recta
it's vulnerable to frequency analysis with very long messages*

(c) What are some advantages of this cipher?

relatively strong
 can use short keyword, with repeated letters
 same letter encoded in different ways

(d) What are some disadvantages of this cipher?

long messages vulnerable to frequency analysis
 kind of a pain to encrypt & decrypt

Optional Challenge: The following ciphertext was encoded using a Vigenère cipher with key AMENDMENT. What is the plaintext?
